

## **[Abstract]**

### **[Abstract of Disclosure]**

The present invention relates to a composition which contains as an active ingredient a ginsenoside glycoside (one or more component selected from the group consisting of ginsenoside Rg<sub>3</sub>, ginsenoside Rg<sub>5</sub> and ginsenoside Rh<sub>2</sub>) or a ginseng extract in combination with a ginsenoside glycoside (one or more component selected from the group consisting of ginsenoside Rg<sub>3</sub>, ginsenoside Rg<sub>5</sub> and ginsenoside Rh<sub>2</sub>), together with an adjuvant acceptable in the pharmaceutical or sitological field, and is formulated in the preparation form acceptable in the pharmaceutical or food purpose field by a method acceptable in the pharmaceutical or food chemistry. The composition of the present invention has a superior cancer-preventive effect on cancers occurring in individuals and populations having a high risk rate of cancer .
